

ELECTRICAL CROSS-BONDING

NAME: _____

DATE: _____

Some types of electrical installations are fitted with cross-bonding which is the connection of the internal gas and water pipes to the installation's earth terminal. In particular, those installation with PME (Protective Multiple Earth) must, by law, be fitted with cross-bonding.

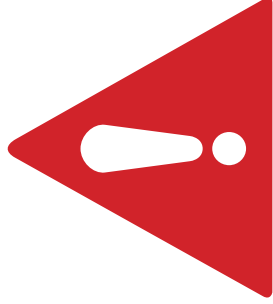

The gas installation pipe fitted in your premises does not appear to be cross-bonded to the electrical installation.

I am required by the Gas Safety (Installation and Use) Regulations, 1998, to tell you that any necessary cross-bonding should be carried out by a competent person.

I advise that you have this checked by a NICEIC Approved contractor or by your electricity Supply Company.

If you are the tenant of this property, would you please bring this matter to the attention of the owner of their agent.

TEL: 02392 252 171 • GAS SAFENO: 198 221
